StarSCAN Version: **4.07**  
Release Date: **07/06/2004**

This release of StarSCAN software ships as a single CD-ROM direct to the dealership.

### Notes

- StarSCAN 4.07 is a vehicle release containing all the data necessary in order to support the 05 ND.
- StarSCAN 4.07 contains up-to-date flash support.
- StarSCAN 4.07 introduces a new feature that provides the technician with a vehicle-wide view of DTC's. From the **Home** screen, touch **System View** then **All DTCs** to see a list of *all* the DTC's set in *all* of the vehicle's ECU's. From there a technician has the option either to clear all the vehicle's DTC's at once or to clear DTC's within individual ECU's.
- StarSCAN 4.07 makes some enhancements to the **Advanced** features under **Network View**:
  - The **Loss of Comm Summary** screen, which provides a vehicle-wide summary of all network "Lost Communication" DTC's, has been streamlined to become more user-friendly.
  - The **Network Topology** screen (a graphical model of the physical electrical wiring of the CAN network) now updates dynamically to show where ECU communication issues may reside on the vehicle.
  - The **Network Topology** screen has also been enhanced to accurately depict vehicle bus splice points.
- StarSCAN 4.07 streamlines the flash download process with better promptings, a more user-friendly password entry, and by enabling the search by VIN option.
- StarSCAN 4.07 addresses several bugs, most notably:
  - In previous releases, updating the tool twice in succession without a power cycle in between resulted in a continuous looping of the update process; StarSCAN 4.07 has addressed this issue.
